At the latest BT/CT/RAD meeting, I spoke about a new item of equipment we are installing called the Tessarae. It is a microarray system which uses chips containing a large number of targets for various pathogens. This technology will allow us to greatly broaden the number of pathogens we can detect in a single test; the range is wider than that of a single real-time PCR test. At the moment, the platform is for experimental use only - no diagnostic testing will be performed.

More information here:

<http://www.tessarae.com/>

**Subject:** Webcast Reminder

Good morning

This is just another reminder that we will be having the third installment of a series of webcasts on Liquid Chromatography this Wed in the auditorium at 1. This one is called Separation Theory.

Thank you
